SUMMARY

Tech enthusiast with an ICT background who likes solving problems by building things. Now studying Business and Financial Technology so I can work across both tech and finance. Keen to keep learning, work with good people, and build things people actually use.

EXPERIENCE

Product Management Intern, GovTech, Singapore

2026 to Present

- Carry out IT audit and compliance checks across internal systems, and track what needs fixing.
- Build front end features, and design the screens in Figma before they go into development.
- Run user acceptance testing with users, then pass what they find back to the engineering team.

Key Account Manager, SME Sales, Veritas Organisation, Singapore

Aug 2025 to Sep 2026

- Looked after a group of SME energy clients, from the first call through to ongoing support and renewals.
- Found new leads through cold outreach and email campaigns, and ran residential roadshows to bring in sign ups.
- Handled client questions and complaints myself so accounts stayed active.

Earlier roles: Receptionist, FriendsGolf Singapore. Usher, National Gallery Singapore (via Adecco).

2023 to 2024

- Front desk, payments, visitor guidance and event setup. Worked these alongside full time study.

PROJECTS

SCI Agent Copilot, Business Innovation Project, Nanyang Polytechnic

2026

React, Vite, Supabase, Capacitor

- Insurance agents were digging through policy documents by hand, and missing a compliance rule can cost the firm real money.
- Built a copilot that searches the policy base, checks messages against MAS disclosure rules, and flags where two versions of a document disagree. Shipped it as an installable PWA with a service worker.
- Found a hole in sign up that let anyone register as a policy handler with full write access. Moved role creation to a locked down server side flow, and made the audit trail append only so records cannot be edited later.

Multi Asset Portfolio Dashboard, personal project

2026

Python, Streamlit, pandas, Moomoo OpenD API

- Wanted one view of a Singapore portfolio split across ETFs, SGX blue chips, S-REITs and US stocks, instead of checking four places.
- Built a dashboard that reads a broker statement export or pulls positions live from the account.
- Prices fall back through three tiers: broker feed, then intraday quote, then daily close. Each row shows which tier priced it and how old the quote is, so a delayed price never gets read as live.

Personal Portfolio Website, alexius-lee.vercel.app

2026

Three.js, WebGL, GLSL, Vite, JavaScript

- Wanted a portfolio that showed what I can build, instead of just listing things I had built.
- Made the whole page one WebGL object built from 220 connected strands. It reforms into a different shape for each section as you scroll, with the morph running in the vertex shader so the browser stays smooth.
- Light and dark mode are one colour pair swapped over. The page still reads fine if WebGL or JavaScript fails. Deployed on Vercel and rebuilt on every push to GitHub.

GrowcerySG, Business Application Development, Nanyang Polytechnic

2025 to 2026

C#, ASP.NET Web Forms, SQL Server, JavaScript, WebSockets

- Team project to get more people growing and buying food locally in Singapore.
- Built live chat between users over WebSockets, so messages show up in real time without refreshing the page, plus quizzes, achievements, leaderboards and rewards to keep people coming back.
- Added a carbon tracker that works out how much CO2 you save by buying local, using published transport emission factors and real Singapore import distances.

- Singapore's birth rate keeps falling while housing keeps getting more expensive. Wanted to see how closely the two track each other.
- Pulled HDB resale prices, the resale price index and median income by age group against the national fertility rate. Ran a lagged comparison on the 25 to 29 and 25 to 34 age groups, then split it by flat type, floor area, storey range and lease remaining.
- Presented it as an interactive Tableau dashboard story.
Found trends and patterns in which housing has changed over the years, and across the various age groups.

- Clinics were booking appointments and chasing patients by hand.
- Built a web app with scheduling and patient contact as separate modules, plus WhatsApp OTP so patients could verify without making an account, and real time notifications for booking changes.

SKILLS

Programming: Python, JavaScript, C#, SQL, HTML, CSS
Frameworks: React, Flask, ASP.NET Web Forms, Streamlit, Tailwind CSS, jQuery
Data: Tableau, pandas, business statistics, data analysis and visualisation
Tools: Supabase, MongoDB, SQL Server, Vite, Git, Capacitor
Business: Project delivery, key account management, lead sourcing, client communication, sales presentations

EDUCATION

CERTIFICATIONS

JavaScript (Basic), HackerRank, 2025. Python (Basic), HackerRank, 2025. Cybersecurity Fundamentals, IBM, 2024. Web Development Fundamentals, IBM, 2024.

LEADERSHIP AND ACTIVITIES

NYP Students' Union (2024 to now). Organised Alumni Day 2024 and Bonding Day: Core Connections. Facilitated at Leadership Outreach Camps, Leadership Training Camps and Leaders Quest 2025.
School of IT Club (2024 to now). Represented the school at NYP Open House 2025, helping prospective students and running event logistics.
Chinese Orchestra and student leadership, Beatty Secondary. SYF Distinction 2021 and SYF Accomplishment 2023. Instruments IC 2023. Sports Leader 2021 to 2023. Orientation Lead 2022 and 2023.
